

Are You Sleeping with the Enemy

Who is the Enemy?

How many times have you or a family member awakened from a night's sleep with itchy skin or red and irritated eyes? Or how about a stuffed up nose, a barrage of sneezes, wheezing or tight chest, painful head, or sinus ache, a general feeling of fatigue, or even depression, all for no particular reason?

Well, the fact is that you or a member of your family could be one of the 50 million Americans that suffer from some kind of allergy. The odds are the culprit may well be the millions of dust mites that have made a home for themselves in your mattress and are feeding on the skin flakes we shed every night. That's right! Millions of microscopic dust mites that have been medically proven to trigger a whole host of allergic reactions, like asthma, bronchitis, eczema and more.

It doesn't matter how new a mattress is, how often you change the sheets, mattress cover, or even if you take the time to vacuum it once in a while, which is pretty much a waste of time against these deeply embedded foes. Even the so-called hypoallergenic mattresses are not immune. It takes a clinically developed, scientific and professional application to remove the enemy within. It takes Hygienitech.

The Hygienitech Mattress Cleaning System isn't new. Europeans have been taking advantage of this safe, chemical-free, allergen eliminating process for more than a decade, and now you can too.

The Free Test!

All we need is a few minutes of your time so that we can perform Hygienitech's Free, No Obligation test. There's no need to remove the mattress from the frame, all we require is a small, exposed corner. You'll be amazed at what we're going to find.

Next, we'll take this collected sediment and perform a simple Allergen test, which will enable you to see first hand, the level of contamination that exists, all in an easy to read, color-coded format. It's that simple. The

decision to have this revolutionary mattress cleaning service performed is entirely up to you. Remember, there's no obligation on your part.

How it Works

The Hygienitech Mattress Cleaning System combines high frequency, pulsating waves, incredible suction and a patented, high intensity germ killing, UVC light to pulverize and extract all the dust mites, bacteria, viruses, fungal spores, harmful organisms and other sediment that accumulates in your mattresses.

The entire Hygienitech process is a dry, chemical free process, so there's no odor, no drying time and it's safe for any type of mattress, from crib to king size.

The link between sleeping on a clean mattress and reducing allergies was discovered in Europe, more than 14 years ago.

Recent estimates indicate that more than 21% of the homes in Europe have mattress cleaning services performed on a regular basis. No wonder Europeans consume just a fraction of the allergy and cold medications that Americans are quick to take.

We Americans spend approximately one-third of our lives in bed, moving around frequently. As a result, even the slightest movement causes these harmful microscopic enemies to become airborne for hours, living in the air that we breathe. It's time to fight back and eliminate the mattress as a health risk. It's time for Hygienitech.

Just What the Doctor Ordered!

Dust mites produce guanine, a combination of mite droppings and saliva, and all the latest medical evidence points to this as the dominant cause of most allergies and other widespread maladies such as asthma, eczema, hay fever, bronchitis, inflammation of the mucous membranes, itchy red eyes, headaches, sinus problems and more.

Common sense tells us that if we can eliminate the cause, we can eliminate the symptoms. And, if there are any children in the house, medical evidence points to the fact that exposure to these dust mites in the first year of life may very well trigger a lifelong allergy.

The scientifically proven Hygienitech Mattress Cleaning process is a non-evasive and totally safe way to disinfect any mattress. It's affordable, it's simple, and it promotes a healthy way of life.
